Near vision refers to the ability to see objects clearly at close distances, typically within 14 inches (35 centimeters) from the eyes. This visual function is crucial for daily activities such as reading, sewing, using smartphones, or working on a computer. As we age, many individuals experience a decline in near vision due to presbyopia—a natural age-related condition where the eye's lens becomes less flexible, making it difficult to focus on nearby objects.

Maintaining good near vision is vital not only for comfort and productivity but also for overall eye health. Regular assessment can help detect early signs of vision issues, prompting timely interventions such as corrective lenses, exercises, or professional eye care.
