Overview of CCNA LAN, Switching, and Wireless Concepts

Fundamental LAN Concepts

Local Area Networks (LANs) connect computers and devices within a limited area such as an office or campus. They are characterized by high data transfer rates, low latency, and the use of Ethernet technology. CCNA labs focus on understanding LAN topologies, addressing schemes, and basic network design principles.

Switching Technologies

Switches operate at Layer 2 (Data Link Layer) and are fundamental in creating efficient, segmented networks. Key concepts include MAC address tables, VLANs, trunking, and spanning tree protocol (STP). Labs often involve configuring switches, creating VLANs, and enabling inter-VLAN routing.

Wireless Networking Basics

Wireless LANs (WLANs) provide mobility and flexibility. CCNA wireless labs cover setting up wireless access points (APs), security configurations, SSIDs, and troubleshooting connectivity issues. Understanding wireless standards (e.g., 802.11a/b/g/n/ac) and security protocols (WPA2, WPA3) is crucial.

Common Topics and Sample CCNA 2 Questions

- Routing Protocols and Their Characteristics

Routing protocols are at the core of dynamic routing. CCNA 2 emphasizes understanding how different protocols function, their advantages, and their configurations.

Sample Question:

Which routing protocol uses hop count as its metric?

Answer:

RIP (Routing Information Protocol)

Explanation:

RIP is distance-vector protocol that determines the best path based on hop count, with a maximum of 15 hops.

- VLANs and Trunking

VLANs segment networks logically, enhancing security and reducing broadcast domains. Trunking allows multiple VLANs to traverse a single physical link.

Sample Question:

What protocol is used to negotiate trunk links between switches?

Answer:

DTP (Dynamic Trunking Protocol)

Explanation:

DTP automates the configuration of trunk links, facilitating VLAN traffic across switches.

- Inter-VLAN Routing

Inter-VLAN routing enables devices on different VLANs to communicate. This can be achieved via router-on-a-stick or multilayer switches.

Sample Question:

Which device performs inter-VLAN routing in a switched network?

Answer:

Layer 3 switch or router

Explanation:

Since VLANs are separate broadcast domains, a Layer 3 device routes traffic between them.

- WAN Technologies

CCNA 2 also covers WAN connectivity options such as PPP, Frame Relay, and MPLS.

Sample Question:

Which WAN protocol encapsulates multiple Layer 3 protocols over serial links?

Answer:

PPP (Point-to-Point Protocol)
