Sample Topics & Practice Questions

Below are example questions aligned with the content typically found in a review packet:

Question 1:

Describe how the process of subduction contributes to the formation of mountain ranges.

Answer:

Subduction occurs when an oceanic plate collides with a continental plate, and the denser oceanic plate sinks beneath the continental plate into the mantle. This process leads to the melting of the subducted plate, resulting in magma that can form volcanic arcs. The collision and subsequent compression cause crustal uplift, forming mountain ranges such as the Andes.

Question 2:

Explain the role of greenhouse gases in Earth's climate system.

Answer:

Greenhouse gases, such as carbon dioxide and methane, trap heat within Earth's atmosphere through the greenhouse effect. They allow sunlight to enter but prevent some of the infrared radiation from escaping back into space, maintaining a habitable temperature on Earth. An increase in these gases can lead to global warming and climate change.
