While their core focuses differ, both frameworks emphasize alignment between IT and business, strategic planning, and risk management. Recognizing these overlaps is fundamental for effective mapping.

The Rationale for Mapping: Why Integrate TOGAF 9 and COBIT 5?

Organizations often adopt multiple frameworks to address distinct needs?architecture development, governance, risk management, compliance, and operational excellence. Integrating TOGAF 9 and

COBIT 5 offers several benefits:

- Holistic Governance and Architecture Alignment: Ensuring architecture strategies support governance objectives.
- Streamlined Processes: Reducing duplication and improving communication among teams.
- Enhanced Risk Management: Embedding governance controls within architectural planning.
- Improved Compliance: Ensuring architectural artifacts support regulatory requirements.

Given these benefits, mapping provides a structured approach to harmonize activities, artifacts, and controls, maximizing organizational value.

Methodologies for Mapping TOGAF 9 to COBIT 5

Conceptual Approach

Mapping involves establishing relationships between the components of TOGAF 9 (phases, artifacts, and domains) and COBIT 5 (processes, enablers, and governance objectives). This process typically follows these steps:

- Identify Corresponding Domains and Objectives: Determine which parts of each framework address similar concerns.
- Define Relationships: Map architecture artifacts to governance processes that utilize or influence them.
- Align Terminology and Metrics: Ensure common understanding and measurement criteria.
- Develop Mapping Matrices: Create visual tools to illustrate relationships.

Practical Tools and Techniques

- Mapping Matrices: Tabular representations showing relationships between processes and artifacts.
- Process Flow Integration: Overlaying architecture development activities within governance processes.
- Reference Framework Integration: Using standard reference models to align concepts.

Existing Mapping Frameworks and Standards

While no universally accepted, detailed mapping exists, several organizations and research initiatives propose mappings:

- COBIT and TOGAF Alignment Guides: Published by The Open Group and ISACA, offering high-level mappings.
- IT Governance Frameworks: Combining COBIT’s control objectives with TOGAF’s architecture phases.
- Case Studies: Real-world examples illustrating integration in specific domains.

Key Mapping Areas: Deep Dive Analysis

- Architecture Development and Governance Processes

TOGAF 9 ADM Phases (Preliminary, Architecture Vision, Business Architecture, Information Systems Architectures, Technology Architecture, Opportunities & Solutions, Migration Planning, Implementation Governance, Architecture Change Management) correspond with COBIT 5 processes such as:

- EDM01 (Ensure Governance Framework Setting and Maintenance): Establishes governance structures that oversee architecture activities.
- APO02 (Manage Strategy): Aligns architecture vision with enterprise strategy.
- APO03 (Manage Enterprise Architecture): Directly relates to architecture development phases.
- BAI01 (Manage Programs): Implements architecture projects and initiatives.
- DSS05 (Manage Security Services): Ensures architecture addresses security controls.

Mapping Focus:

TOGAF ADM Phase	Corresponding COBIT 5 Process(s)	Description
-----	-----	-----

Preliminary & Architecture Vision	EDM01, APO02	Establish governance and strategic alignment
Business Architecture	APO03, BAI02 (Manage Requirements)	Develop and manage architecture artifacts
Information & Technology Architectures	BAI03 (Manage Solutions Identification), DSS01 (Manage Operations)	Design and implement technical solutions
Implementation Governance	EDM02 (Monitor, Evaluate and Assess), BAI04 (Manage Availability	

and Capacity) | Oversee project execution and controls |

- Artifacts and Controls

Mapping artifacts such as architecture repositories, models, and standards to COBIT's enablers and control objectives ensures that architecture outputs are governed properly.

Examples:

- Architecture Repository (TOGAF) aligns with Information and Processes enablers.
- Architecture Principles relate to Policies and Procedures.
- Stakeholder Management aligns with Organizational Structures and People enablers.

- Risk and Compliance Management

COBIT 5 emphasizes risk management through processes like APO12 (Manage Risk) and MEA01 (Monitor, Evaluate and Assess Performance and Conformance). These can be integrated with TOGAF's architecture change management and security architecture to embed risk considerations into architectural decisions.

Challenges and Limitations in Mapping

Despite the apparent alignment, several challenges hinder straightforward mapping:

- Terminology Discrepancies: Different vocabularies and conceptual models.
- Scope Divergence: TOGAF focuses on architecture development, COBIT on governance and controls.
- Granularity Variations: Frameworks differ in detail level, complicating direct correspondence.
- Organizational Context: Variations in organizational maturity and culture influence mapping effectiveness.

Addressing these challenges involves:

- Developing standardized mapping templates.
- Tailoring frameworks to organizational needs.
- Engaging cross-disciplinary teams for holistic understanding.

Practical Recommendations for Organizations

Step-by-Step Approach to Effective Mapping

- Assess Organizational Goals: Clarify strategic priorities and compliance requirements.
- Identify Relevant Framework Components: Select architecture artifacts and governance processes aligned with goals.
- Develop Custom Mapping Matrices: Use industry best practices to tailor relationships.
- Embed Governance into Architecture Development: Incorporate controls and policies from COBIT into TOGAF's ADM phases.
- Establish Continuous Monitoring: Use COBIT's MEA processes to evaluate the effectiveness of architecture governance.
- Train Teams and Stakeholders: Ensure shared understanding of frameworks and their integration.

Question What is the primary purpose of mapping TOGAF 9 to COBIT 5? The primary purpose is to align enterprise architecture development (via TOGAF 9) with IT governance and control frameworks (via COBIT 5), ensuring comprehensive management of IT assets and processes. How does mapping TOGAF 9 to COBIT 5 benefit organizations? Mapping helps organizations integrate architecture and governance frameworks, improve risk management, ensure compliance, and streamline IT processes by providing a clear correlation between architectural phases and governance controls. What are the key challenges when mapping TOGAF 9 to COBIT

5? Key challenges include aligning different terminologies, managing the complexity of mapping detailed processes, and ensuring that the combined frameworks do not create redundancies or gaps in governance and architecture practices. Which COBIT 5 processes are most commonly mapped to TOGAF 9 phases? Processes related to governance and management of enterprise IT, such as APO (Align, Plan, Organize) for architecture and EDM (Evaluate, Direct, Monitor) for governance, are commonly mapped to TOGAF 9 architecture development phases to ensure strategic alignment. Are there any established standards or tools for mapping TOGAF 9 to COBIT 5?
