1. Creating the Product Class

- Define attributes such as ``product_id``, ``name``, ``price``, and ``quantity``.
- Implement getter and setter methods for data encapsulation.
- Include a method to display product details in a formatted manner.

```
```python
```

```
class Product:
```

```
 def __init__(self, product_id, name, price, quantity):
```

```
 self.product_id = product_id
```

```
self.name = name
```

```
self.price = price
```

```
self.quantity = quantity
```

```
def display_product(self):
```

```
 print(f"ID: {self.product_id} | Name: {self.name} | Price: ${self.price:.2f} | Quantity: {self.quantity}")
```

```
 ...
```

## 2. Implementing Data Validation

- When accepting user inputs, validate data types and value ranges.
- For example, ensure that `price` and `quantity` are positive numbers.

```
```python
```

```
def get_positive_float(prompt):
```

```
    while True:
```

```
        try:
```

```
            value = float(input(prompt))
```

```
            if value > 0:
```

```
                return value
```

```
        else:
```

```
            print("Please enter a positive number.")
```

```
    except ValueError:
```

```
        print("Invalid input. Please enter a numeric value.")
```

```
    ...
```

3. Building the Menu-Driven Interface

- Offer options to add, display, or exit.
- Use loops to keep the program running until the user chooses to exit.

```
```python

def main():

 products = []

 while True:

 print("\nInventory Management System")

 print("1. Add Product")

 print("2. Display Products")

 print("3. Exit")

 choice = input("Select an option (1-3): ")

 if choice == '1':

 add_product(products)

 elif choice == '2':

 display_products(products)

 elif choice == '3':

 print("Exiting the program.")

 break

 else:

 print("Invalid choice. Please try again.")
```

...

## 4. Adding Products to the Inventory

- Collect validated input data.
- Instantiate a new `Product` object and append it to the list.

```
```python

def add_product(products):

    product_id = input("Enter Product ID: ")

    name = input("Enter Product Name: ")

    price = get_positive_float("Enter Price: $")

    quantity = get_positive_float("Enter Quantity: ")

    new_product = Product(product_id, name, price, quantity)

    products.append(new_product)

    print("Product added successfully.")

...

```

5. Displaying All Products

- Loop through the list and call display methods.

```
```python

def display_products(products):

 if not products:

 print("No products in inventory.")

...

```

else:

```
print("\nCurrent Inventory:")
```

for product in products:

```
product.display_product()
```

```
...
```
